Micro-Coax Sets New Standard for Online Ordering

Pottstown, PA - August 10, 2007: Micro-Coax has just announced they are offering two day turn-around on webstore orders.

Customers can still configure custom precision microwave cable assemblies through the Micro-Coax online webstore - but now can receive them in two days or less.*

According to Brent Smith, Technical Director of Test & Measurement, "Micro-Coax understands that when Test Engineers need custom precision test assemblies - they need them now - not the usual 2-6 weeks offered by our competitors. At Micro-Coax we were the first to offer online ordering of custom assemblies and now we continue to raise the bar with rapid turn-around times."

About Micro-Coax:

Micro-Coax is a leading provider of transmission line solutions for radio frequency (RF) and microwave applications. Serving the defense, satellite, telecommunications, test and measurement markets for more than forty years, Micro-Coax has earned a reputation for mission performance and excellent customer service. A broad technology base allows Micro-Coax to quickly respond to customer needs with optimized solutions of coaxial cables, connectors, harness assemblies and conductive fibers.

To place an order:

Go to www.micro-coax.com and click on "Visit our Webstore"
