

Semi-Rigid Cables MIL-DTL-M17 to Commercial Compatibility

Micro-Coax semi-rigid cables are manufactured to the most exacting standards in the industry using state of the art equipment and controls. Our MIL-DTL-17 Qualified Products List (QPL) cables and their companion commercial cables are manufactured on the same production lines using the same processes, materials, and testing.

Due to legacy issues with some customers, Micro-Coax continues to offer both the M17 QPL cables and their commercial equivalent part numbers, even though the cables are identical and completely interchangeable. Therefore, Micro-Coax will from time-to-time, substitute M17 QPL cable for their commercial cable equivalent on some customer orders. Any minor differences between the M17 QPL and their commercial equivalent cables published data is handled by testing the cables to the more stringent requirement.

This applications note certifies that all Micro-Coax MIL-DTL-17 cables supplied in support of commercial grade requirements will satisfy both the M17 QPL and Micro-Coax commercial grade published specifications.

Choose Micro-Coax. It's just a better cable.
